**§ 1.125 Substitute specification.**

- (a) If the number or nature of the amendments or the legibility of the application papers renders it difficult to consider the application, or to arrange the papers for printing or copying, the Office may require the entire specification, including the claims, or any part thereof, be rewritten.
- (b) Subject to § 1.312, a substitute specification, excluding the claims, may be filed at any point up to payment of the issue fee if it is accompanied by a statement that the substitute specification includes no new matter.
- (c) A substitute specification submitted under this section must be submitted with markings showing all the changes relative to the immediate prior version of the specification of record. The text of any added subject matter must be shown by underlining the added text. The text of any deleted matter must be shown by strike-through except that double brackets placed before and after the deleted characters may be used to show deletion of five or fewer consecutive characters. The text of any deleted subject matter must be shown by being placed within double brackets if strike-through cannot be easily perceived. An accompanying clean version (without markings) must also be supplied. Numbering the paragraphs of the specification of record is not considered a change that must be shown pursuant to this paragraph.

## MEDIWATCH

### Summary of Invention

D  
n  
e  
9/13/2005  
In view of the forgoing inherent disadvantages in the known types of  
medication storage devices with an alarm now present in the prior art  
the present invention provides a new and unique combination of alarm watch  
pill storage devices, and medical alert bracelets/necklaces/cards.

The general purpose of the present invention, which will be described  
subsequently in greater detail, is to provide a new multi-alarm watch, storage  
container which has many of the advantages of the strap on medication  
storage and reminder watches mentioned heretofore and many novel, unique  
features that result in a new alarm, medication storage watch device, which  
is not anticipated, rendered obvious, suggested, or even implied by any of  
the prior art strap-on medication storage and reminder watch either alone  
or in any combination thereof.

To attain this, the present invention generally comprises an alarm watch  
which includes a housing having a top wall, an opening in the top wall with  
a storage compartment that receives separate compartment divider inserts,  
consisting of two, three or four divisions, independent from the other.  
These inserts are removable and interchangeable. The housing includes a  
cover member hingedly attached with the cover member being essentially a

## MEDIWATCH

### Abstract

A combined watch, storage container and a medical alert bracelet, thus  
D O t  
M D f

eliminating the need for wearing a separate medical alert bracelet/necklace  
with separate alarms alerting the wearer when to take medication. The  
combined watch, pillbox storage container, with a locking device is hinged  
to the base, having a main face with four individual watch faces within.

Control mechanisms fixedly mounted on the underside, of the lid and is  
adapted for tracking the time of day as well as the ability to set alarms  
independently and is powered by a battery.

Fitting snuggly, the underside lid contains a two-sided removable disc for  
listing medications and important medical information. Storage device,  
which is the base housing, having bottom and peripheral walls coupled to  
and away from the peripheral edge. and securely hinged to the lid. Storage  
device has multiple removable divisional inserts, allowing the choice for  
number of compartments with a plastic covered, rotating shield, which the  
wearer spins to open over the selected compartment. The underside  
engraved base serves as a medical alert bracelet with medical information  
permanently engraved

#### **DESCRIPTION OF THE PREFERRED EMOIDIMENT**

*9/13/2006* With reference now to the drawings and in particular to figures 1 through 7, thereof a new combined analog alarm watch, storage container and medical alert device embodying the principals and concepts of the present invention and generally designated reference number 2 will be described.

As best illustrated in figures 1, 2 and 7, the combined watch storage container and medical alert device generally comprises an alarm watch device 1 and a storage device 2 with four smaller watch faces 8, 9, 10, 11 contained within the main watch face 1, date window 12, second hand 13 and hour hands 14.

A housing having a circular shape 4 having and opening for receive removable divisional inserts 34, 36, 38 and a covered member 15, with a release button 16, hingedly attached 17, to the housing 4, for releasability and securely closing over housing (base).

An inner lid 18, containing a disc 3, 5 encircled by a ring 19 containing topside of disc 20 for emergency contact information and bottom side of disc 21 for pill information held in place with an inner lid release button 22.

Bracket members 23 attached to cover member 15 and base housing 4 for securing chain 24, approximately 18 inches in length for wearing around users neck for a neck watch or for carrying in a pocket for a pocket watch/

## BACKGROUND OF INVENTION

### 1. FIELD OF INVENTION

The present invention relates to the field of watches with a dual function of:

- a. multiple alarm watch
- b. medication (pill) carrying/storing device

The timepiece is operated by an analog mechanism, which has either an audio or Silent (vibrating alarm.)

This present invention also relates to devices for providing medical information and personal identifying information combined with a timepiece/ pillbox.

When compared to prior art, this invention is unique by its simplistic mode of operation.

When compared to prior art, this invention offers the consumer several choices with just the purchase of one mediwatch, because it has multi-divisional interchangeable compartments which provides the wearer the choice of the insert that best suits his/her needs. Marketing it with this diversity is the most cost-effective method for the consumer.

The present invention also relates to the field of medical alert bracelets/necklaces and medical information cards. When compared to prior art, this invention has permanently engraved medical information on

**SPECIFICATION: MEDIWATCH is a watch combined with a medication pill box all in one. This watch has an alarm system that can be set for three or four different alarms. These alarms will offer the choice of setting each alarm to sound off with:**

- 1. Regular alarm buzzing or ringing**
- 2. Voice alarm with he voice message "Time to take your medication."**
- 3. Vibration - no audio alarm**
